*Grid Parity: The Art of Financing Renewable Energy Projects in the US* Gene Beck 2015-07-20 This important new guide provides an in-depth examination of the knowledge, insights and techniques which are essential to success in the financing of renewable energy projects. Bringing to this book over 35 years of experience with special expertise in capital asset financing for energy projects, the author provides the reader with a comprehensive overview of all the disciplines which must come into play to finance renewable energy projects in America today. Each component of "the deal" is explored, including the relevant tax, accounting, legal, regulatory, documentation, and asset management, along with the legislative drivers which impact this dynamic growth sector. Case studies-complete with project documentation samples-provide lessons which you'll not find available in traditional finance textbooks. These studies illustrate in detail what it takes to compete successfully in the green energy marketplace.

*Strategy, Structure and Corporate Governance* Nabyla Daidj 2016-07-01 Since the beginning of the 2000s, important changes in external environments have affected the corporate governance practices of firms all around the world. The corporate governance structure in each country develops in response to country-specific factors and conditions. Firms are currently engaged in a variety of dynamic business relationships such as business networks, strategic alliances, and conglomerates especially in high technology sectors. Strategy, Structure and Corporate Governance by Nabyla Daidj, proposes to analyze the main trends and drivers of change in corporate governance of several kinds of organizations: - Large conglomerates. The development of large and complex conglomerate organizations have played an important role in the economy in Japan but also in other countries such as Korea with chaebols, which can be defined as closely intertwined industrial groupings. - Inter-firms networks (districts, clusters etc.); and, - 'Recent' forms of inter-firms networks (business ecosystems). The author examines several case studies and shows how shifts in markets and global competition are reconfiguring transactions within these organizations and are impacting corporate governance systems.

**Digital Transformation** Nirjhar Chakravorti 2022-06-23

With the advent of digital technologies, society is reshaping itself radically. In the last decade, digital technologies have brought fundamental changes in the industry and business environment. The holistic socioeconomic and industrial changes are a result of general-purpose technology aspects of digital transformation, which are rare and have inherent capabilities of self-transformation to bring long-term benefits across the entire global business environment. After the steam engine, electric generator and printing press, the recent development of digital transformation has created an opportunity with extensive sustainable and incremental influence for disruption and renovation. However, the most important difference between digital transformation and the previous general-purpose technologies such as steam engines and electric generators is the pace of technology's penetration across the globe. To cope with the accelerated speed of global digitization, the digital transformation process should be accepted, adopted and adapted across society and business utilizing a multi-dimensional strategy. This book illustrates a strategic structure that covers Digital Challenges for Industries, Applicability for Digital Transformation, Digital Transformation Framework, People and Organization Structure, Capability Delivery Activities and Life Cycle Benefits. How will businesses embrace digital transformation? How will organizations formulate a digital transformation strategy? How will they invest in digital technologies? To answer these questions, a strategic structure is created which can provide guidelines to businesses to create a framework for digital transformation that includes strategy, process, governance and funding. The exponential growth in data capacity (storage, process and communication) due to rapid digitalization has created infinite opportunities and different dimensions to businesses. Digital platforms have enabled alternative business models by deconstructing the traditional value chains. Agile concepts driven by design thinking have brought innovative perspectives with an environment of boundless disruption. To run a company with sustainability and manage disruptions more consciously, the adoption of a digital platform with an appropriate strategy is the only viable option. Digital transformation (DX) goals and strategies should be in line with a company's business objectives. The strategic structure explained in the book is a global framework that can be adopted by any profit or nonprofit organization. Like any other transformational process, digital transformation has created structural tension between "old" and "new". In this tension, employees play a large role and their clarity of thought regarding the transformation process is of paramount interest. To overcome this tension, companies need to orient as learning organizations, which will provide opportunities for growth in an ambidextrous environment, embraced with a digital ecosystem. The book explains how the structural tension between old and new can be mitigated by effectively involving all stakeholders in the transformation process.

**Strategies for Urban Network Learning** Leon van den Dool 2020-05-06 This book presents international experiences

in urban network learning. It is vital for cities to learn as it is necessary to constantly adapt and improve public performance and address complex challenges in a constantly changing environment. It is therefore highly relevant to gain more insight into how cities can learn. Cities address problems and challenges in networks of co-operation between existing and new actors, such as state actors, market players and civil society. This book presents various learning environments and methods for urban network learning, and aims to learn from experiences across the globe. How does learning take place in these urban networks? What factors and situations help or hinder these learning practices? Can we move from intuition to a strategy to improve urban network learning?

*Seismic Isolation Strategies for Earthquake-Resistant Construction* Mikayel Melkumyan 2018-10-15 Earthquakes are catastrophic events that cause huge economic losses due to the vulnerability of the existing building stock. However, collapses of vulnerable buildings can be avoided if preventative measures, such as enhancement of their earthquake resistance, are implemented on time. This book will allow the reader to become acquainted with a number of unique, modern and cost-effective seismic isolation strategies, which can be easily, and in very short periods of time, and without interruption of the use of the buildings, implemented with high efficiency in existing buildings, making them earthquake proof. An important aspect here is that the book's seismic isolation strategies are demonstrated on real examples of existing buildings with different structural systems, such as reinforced concrete frame buildings with shear walls and stone buildings with load-bearing walls. The cost-effectiveness of the suggested strategies is further proved by comparative analyses carried out for buildings both with and without seismic isolation systems.

*Strategy, Structure, and Performance of MNCs in China* Yadong Luo 2001 China is the largest emerging market in the world, yet Western MNCs have invested significantly less there than their Asian MNC counterparts. Luo systematically compares Western and Asian investment strategies and their performance in the China market and finds lessons that Westerners must heed. He also reviews and analyzes new economic and regulatory environments (e.g., WTO) in China and their potential effect on all foreign investors. Clearly written and readable by anyone reasonably familiar with matters of world trade and investment, the book illustrates its points with case studies drawn from Luo's own research and is difficult to find elsewhere. The result is a needed contribution to the literature on international investment in the China market, primarily for upper level executives and scholars specializing in emerging markets and international business.

**Global Strategy** Vinod K. Jain 2016-07-15 Global Strategy: Competing in the Connected Economy details how firms enter, compete and grow in foreign markets. Jain moves away from the traditional focus on developed countries and their multinational enterprises, instead focusing on both developed and emerging economies, as well as their interaction in an increasingly connected world. As the current global business environment is increasingly shaped-and connected-by faster technological developments, geopolitical forces, emerging economies, and new multinationals from those economies, this highly charged dynamic provides rich opportunity to revisit mainstream paradigms in globalization, innovation, and global strategy. The book rises to the challenge, exploring new competitive phenomena, new business models, and new strategies. Rich illustrations, real-world examples, and case data, provide students and executives with the insights necessary to connect, compete, and grow in a globalized business environment. This bold book succinctly covers strategy models and implementation for a range of global players, providing students of strategy and international business with a rich understanding of the contemporary business environment. For access to additional materials, including Powerpoint slides, a list of suggested cases, and sample syllabus, please contact Vinod Jain (vinod.jain01@yahoo.com).

**Numerical Modeling Strategies for Sustainable Concrete Structures** Pierre Rossi 2022-08-01

This volume highlights the latest advances, innovations, and applications in the field of sustainable concrete structures, as presented by scientists and engineers at the RILEM International Conference on Numerical Modeling Strategies for Sustainable Concrete Structures (SSCS), held in Marseille, France, on July 4-6, 2022. It demonstrates that numerical methods (finite elements, finite volumes, finite differences) are a relevant

response to the challenge to optimize the utilization of cement in concrete constructions while checking that these constructions have a lifespan compatible with the stakes of sustainable development. They are indeed accurate tools for an optimized design of concrete constructions, and allow us to consider all types of complexities: for example, those linked to rheological, physicochemical and mechanical properties of concrete, those linked to the geometry of the structures or even to the environmental boundary conditions. This optimization must also respect constraints of time, money, security, energy, CO2 emissions, and, more generally, life cycle more reliably than the codes and analytical approaches currently used. Numerical methods are, undoubtedly, the best calculation tools at the service of concrete eco-construction. The contributions present traditional and new ideas that will open novel research directions and foster multidisciplinary collaboration between different specialists.

**BUSINESS POLICY AND STRATEGIC MANAGEMENT** VIPIN GUPTA 2007-01-01 This innovative introduction to business policy and strategic management, covering both the illustrative cases and conceptual foundation, offers authoritative approaches to strategic leadership in emerging markets.
